

Nexspan™

ENHANCING THE QUALITY OF LIFE

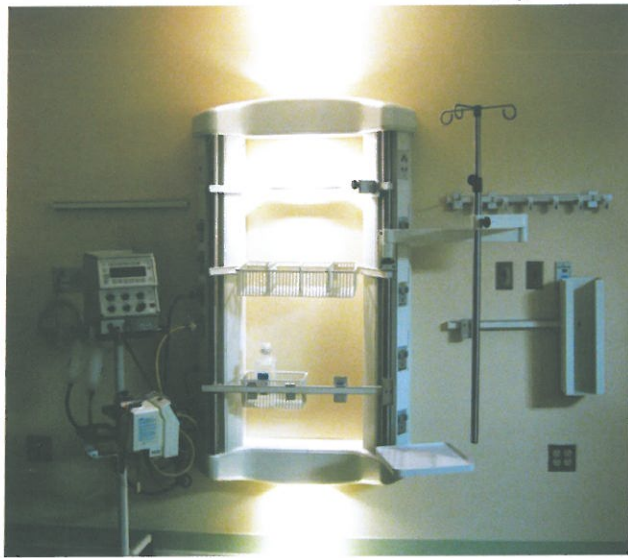

Equipment Management Systems

User-Defined Organizational Strategy

- Clinical support supplies and devices, such as monitors, sharps, glove boxes, and baskets
- Infection control equipment, mounted where needed
- Equipment management rail, integrated into architectural designs
- Easy Med Gas expansion

- Adaptable and expandable for future needs
- Effectively manages supplies without the use of carts or cabinets
- Inventory control initiatives easily adaptable using our rail system
- Accommodates overflow demands easily

MATRIX™ Family of Headwalls

Developmentally Appropriate Headwalls

- Specifically designed to address the recommended standards for newborn ICU design
- User-defined dimmable lighting
- Sound-deflecting design
- Sound-absorbing technology
- Adaptable environment to easily manage multiple births

- Bedside access for the family
- Ergonomically designed vertical headwalls
- Essential services located in ergonomic positions
- User-defined location of clinical equipment
- Simplified rough-ins reduce the cost of installation for both renovations and new construction

The Nexspan Medical Gas and Electric Rail

Flexibility, Adaptability, and Expandability

- Horizontal distribution of essential services
- Medical Gas Rail can be upgraded to any level of care without construction or renovation, by design
- Easily expandable; can be joined to extend lengths for multiple bed areas
- Integrated indirect lighting
- No exposed screw heads for easy cleaning
- Simple installation for both renovation and new construction
- Easily integrates into custom architectural features
- Manages internal equipment
- Non-invasive expansion of medical gas

Nexxspan TAD™

- Reduces transport time by eliminating the need to manually disconnect and move IV pumps
- Automatically locks to the target cone and detaches from delivery cone via a proprietary safety interlock system
- Easy to clean; designed to aid in infection control
- Eliminates need for five star stand and additional transfer personnel to transfer pole mounting devices by shifting the load to the bed frame
- Rotates equipment being transferred independently of TAD™, allowing hospital staff to orient equipment for easy monitoring during transport
- Bed adaptor arm allows TAD™ to fit within the footprint of the bed
