

Dandle WRAP™ Stretch

Dynamic Positioning Aid

The Dandle WRAP *Stretch* offers many swaddling benefits over traditional blankets:

- High performance fabric with 3 way stretch allows freedom of movement with return to midline flexion
- A pouch to maintain lower extremity flexion
- Wide wings that support the shoulders in flexion and encourage hand to mouth self-comforting behaviors
- Velcro® fasteners on pouch and wings that can be adjusted independently of each other to meet baby's individual needs
- Fabric that breathes, yet is absorbent, making it ideal for agitated babies
- Plenty of room between the pouch and the wings for lines or tubing

Babies love to be swaddled! By containing motor activity and mimicking the security of a mother's womb, swaddling comforts babies and results in less crying, more stable heart rates and the ability to sleep through the startle reflex. In a systematic review of swaddling published in *Pediatrics* in 2007, authors found "swaddled infants arouse less and sleep longer. Preterm infants have shown improved neuromuscular development, less physiologic distress, better motor organization, and more self-regulatory ability when they are swaddled... (Swaddling) is supportive in cases of neonatal abstinence syndrome and infants with neonatal cerebral lesions."

Swaddling: A Systematic Review van Sleuwen et al, *Pediatrics*, Vol. 120, No. 4 October 1, 2007, pp. e1097-1106.

MEDICAL

Dandle WRAP Stretch

Dandle WRAP STRETCH is made with fabulous high performance fabric!

- 3 way stretch that returns to its original shape
- Soft, smooth, breathable, wickable, and highly absorbent
- Does not insulate body heat, making it ideal for use in hot and humid environments
- Washes well even in industrial machines with minimal shrinkage and pilling

- **Promotes Bonding** – soft, lightweight fabric allows parents to “feel” their baby without layers of blankets. Unique design helps parents to easily and confidently swaddle and hold their baby, even with medical equipment.
- **Helps During Feeding** – keeps baby organized and contained. Staff can feel respirations through the lightweight fabric and easily see the head and neck in order to visualize sucking and swallowing.

- **Diaper Changes** – upper extremities remain swaddled while pouch is opened for diaper changing. It's like an extra set of hands!
- **Supports During Procedures** – wings and pouch can be adjusted independently of each other to meet the baby's medical and developmental needs.

- **Calms** – adjustable swaddling tension and secure Velcro® help to calm even the most irritable babies and allow more stable infants the freedom to move and normalize tone.
- **Supports Flexion** – the stretchy fabric gives the baby the ability to actively extend and then return to a flexed, midline position.
